Dear Property Manager/ Property Owners

We are writing in regards to services offered to your firm from Allstate Roofing & Consultants. Many property Owners are not aware of the new techniques and approaches to protecting one of the most valuable assets of any building and that is the roof.

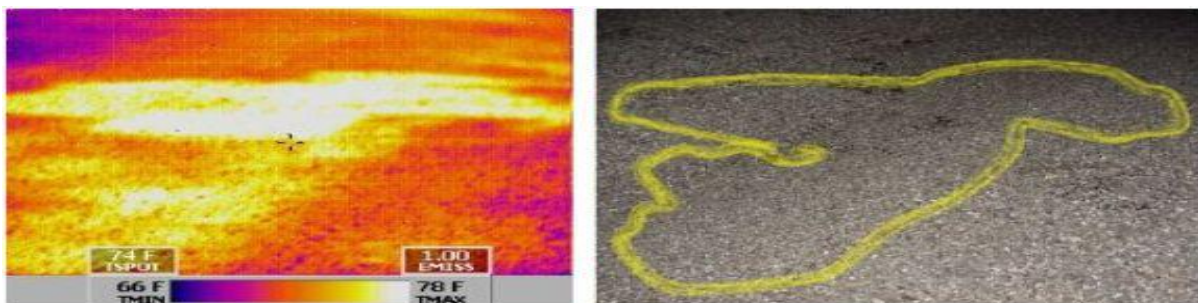

We now offers cost savings programs for preventative and scheduled maintenance on any type of commercial building. Every year over a billion dollars are spent on roof replacements due to premature roof failures. The old cliché “ Out Of Sight Out Of Mind ,” seems to apply to many of the roofs that we inspect. With just a little preventative maintenance and bi-annual inspections, most roof life cycles could be extended by 7-10 years. Roofing materials and the expense for replacements have increased by about 30% in the last year due to oil related products, manufacturing costs, and shipping.

If you can't afford to budget money for roof replacements during these tough economic times, then Allstate can show you how to save money with our scheduled maintenance program. We provide written reports showing the existing conditions and photos of the problem areas, for your review. Our technicians are highly trained in all water-proofing specialties and can provide service unequalled in the roofing industry. We are certified and use the latest testing equipment such as infrared thermal imaging and non destructive moisture testing, So no matter what your roofing need, Allstate Roofing can handle any project large or small with guaranteed results.

If you would like to schedule an inspection or speak with one of our Roof Consultants, then don't hesitate to contact us by phone or email: service@allstateroofconsultants.com

Best Regards

Larry Kinsey

Moisture soaking the insulation below the roof membrane. Flat roof inspection is the most common form of infrared roof inspection. Many roofs need to be replaced prematurely due to moisture damage from leaks and improper installation.
